

RR Sites Map

RR Sites Map currently contains open and closed leaking underground storage tank sites (LUST) and Environmental Repair Program (ERP) sites for which we have a geo-location. Sites are represented as points. However, as you zoom in, some sites are displayed as "larger areas", where the WTM coordinates were collected in a polygon format, instead of a single WTM coordinate. The information displayed can be customized to some extent by using the "Layers" tab and selecting the desired layers, including the sites on the GIS Registry. This application also provides a list of open and closed LUST and ERP sites for which we do not yet have a geo-location, by county, by using the Download Data tab. This combination of information provides a more complete picture of sites in a chosen area. There may be additional contaminated sites for which we do not yet have information, including newly contaminated sites, or sites for which contamination has not yet been discovered or reported. See [Future Expansion of RR Sites Map](#) for upcoming "layers". See [BRRTS on the WEB](#) for the most complete information on sites in an area.
